DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
4. Claims 7-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Umezawa et al. Umezawa et al., disclose a variety of method for the production/purification of daunomycin

(daunorubicin; applicants' "crystalline form of anthracycline antibiotic). Column 7 discloses the use of organic solvents that are miscible with water, and specifically discloses the use of butanol, methanol, ethanol and acetone. The formation of a daunomycin powder is disclosed at column 9. This is considered to meet a limitation of claims drawn to either crystalline forms of daunomycin as well as to compositions thereof.

5. While Umezawa et al., do not disclose the values for X-ray diffraction, such values are considered to be inherent to the daunomycin isolated by the use of the aforementioned solvents. In support of this position, it is noted that daunomycin has been known, isolated and used in the art for years. The art recognizes that different forms of daunomycin are produced, resulting in the use of different solvents so to isolate the desired forms. Accordingly, the use of the same solvents, as disclosed by Umezawa et al., would result in the isolation and precipitation/crystallization of the same form of daunomycin as claimed presently as a product and its properties are inseparable. Accordingly, while Umezawa et al., does not disclose certain ratios of solvents, such ratios are considered to be the result of routine optimizations.

6. For the above reasons, and in the absence of convincing evidence to the contrary, the invention of claims 7-15 is rendered obvious by the prior art of record.

Conclusion

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
